

RRPR 2026: Sixth Workshop on Reproducible Research in Pattern Recognition

B. Kerautret¹; M. Colom²; Federico Bolelli³; D. Lopresti⁴

RRPR 2026, Lyon, France, 22 August 2026

¹Univ Lyon 2, CNRS, INSA Lyon, UCBL, Centrale Lyon, LIRIS, UMR5205, F-69676 Bron, France

²Centre Borelli, ENS Paris-Saclay

³University of Modena and Reggio Emilia, Italy

⁴Lehigh University, Bethlehem, PA 18015

Overview of the program: first part

08:30 - 08:40	Workshop Introduction from organizers (program presentation)
08:40 - 9:20	Keynote 1 Sorina Camarasu Pop (CREATIS) Reproducibility Challenges: A Focus on Computational Reproducibility with Examples from the Medical Imaging Research Community
09:20 - 10:00	Track 1
09:20 - 09:40	[T1] An Open, Hardware-Independent Protocol for Reproducible Data-Budget Evaluation of Semi-Supervised Learning Methods - Erwan Bertrand-Bonvillain , Yassine Nasser and Frédéric Ros
09:40 - 10:00	[T1] Why Ranking Anomaly Detection Algorithms Isn't as Reliable as You May Think - Simon Klüttermann , Jérôme Rutinowski, Frederik Polachowski and Alice Kirchheim
10:00 - 10:30	Coffee break
10:30 - 10:50	[T1] Beating the Style Detector: Three Hours of Agentic Research on the AI-Text Arms Race – Andreas Maier , Moritz Zaiss and Siming Bayer

Overview of the program: second part

Track 2: Companion papers:

10h30 10h50	T1 #1 Beating the Style Detector: Three Hours of Agentic Research on the AI-Text Arms Race	Andreas Maier, Moritz Zaiss and Siming Bayer
10h50 11h05	T2 #15: DepthPolyp in Practice: Reproducible Deployment and Practical Lessons for Real-Time Colonoscopy Segmentation	Zhuoyu Wu, Wenhui Ou, Lexi Zhang, Pei-Sze Tan, Mingze Sun, Junhe Zhao, Wenqi Fang and Raphaël C.-W. Phan
11h05 11h20	T2 #14 Reproducibility Companion Paper: Comparative Evaluation of Deep Learning Architectures and Training Strategies for Diabetic Retinopathy Classification	Mohamed Lamine Benhabireche, Mourad Belhadj, Dalila Tamzalit and Oussam
11h20 11h35	T2 #11 Back to Reproducibility in 3D Anomaly Detection: Revisiting RGB-D for Point-Cloud Evaluation	Remi Lhoste, Antoine Vacavant and Damien Delhay
11h35 11h50	T2 #12 Benchmarking Transformers on Spatio-Temporal River Water Temperature Modeling: Implementation and Reproducibility Notes	Linlin Jia, Benjamin Fankhauser, Vidushi Bigler and Kaspar Riesen
11h50 12h05	T2 #2 Enabling 8B Bitwise Autoregressive Image Generation on Edge GPUs – Implementation and Reproducibility Notes	Enrico Vezzali, Costantino Grana and Federico Bolelli
12h05 12h20	T2 #6 Companion Paper on Multi-modal BLIP-2: Q-Former Variants and Metric Robustness	Antoine Brimont, Titus Zaharia and Ruxandra Tapu

12:30 - 13:30 Lunch

13:30 - 14:10 Keynote 2

[Simon Tournier](#) [Université de Paris Cité](#)

Reproducible computational environment: Archiving and beyond

13:30–14:10 Track 1

14:10 – 14:25 [T1] Aegis: Towards Agentic Support for Software Artifact Reviews - [Konstantin Kirchheim](#), Sebastian Nielebock and Frank Ortmeier

Overview of the program: third part

14:25 – 14:40	[T1] M2S-KD: A Multi-to-Single Modal Distillation Framework for Visible-Infrared Object Detection - Xiguan Li, Kun Wang, Erting Pan, Zi Wang, Yibin Ye, Zhang Li, Qifeng Yu and Banglei Guan
14:40 – 15:00	[T1] Auditing the Auditor: A Reproducibility Study of Grounded Hallucination Auditing in Video Summarization - Muhammad Aqeel Maham Nazir, Marco Cristani and Francesco Setti
15:00 – 15:30	Coffee break
15:30 – 15:50	Outcome on RR labels at ICPR 2026 - Miguel Colom The past, present, and future: the 10 years of the RRPR workshop and the creation of TC-22 - Bertrand Kerautret

Track 2: Companion papers:

T2 #9 On the Reproducibility of the EAST-SPL Pipeline: Event-Aware Statistical Tiling for Soccer Player Localization	Abolfazl Chaman Motlagh and Mikael Nilsson
T2 #10 Reproducing Vision Transformer-Based Risky Tackle Detection in American Football Practice Videos: A Companion Study	Syed Ahsan Masud Zaidi, Lior Shamir and Scott Dietrich
T2 #13 Implementation and Reproducibility Notes on Robust 3D Human Pose Estimation from mmWave Radar via Spatio-Temporal Representation Learning	Kai-Ming Cao, Ming-Han Lee, Wei-Che Hsu, Kun-Ru Wu, Hong-Dun Lin, Ren-De Xie, Bo-Yang Chen and Yu-Chee Tseng
T2 #7 Reproducing AERO-DETR Configuration-Wise Stability and Implementation Constraints in Runway Extraction	Durga Prasad Dhulipudi
T2 #17 Scaling Closed-Loop Feature Channel Configuration with LLMs	Tolgay Atinc Uzun, Radu Timofte and Dmytro Ignatov

Overview of the program: third part

17:05 Closing Discussions - Daniel Lopresti

To ask question and interact online, see shared link:

<https://tinyurl.com/rrpr26>

or

directly in live on the diffusion link:

<https://tinyurl.com/rrpr26visio>

Outline:

- (1) Identify possible topics for the discussion groups.
 - ⇒ Make suggestions: <https://tinyurl.com/rrpr26disc>

Outline:

- (1) Identify possible topics for the discussion groups.
⇒ Make suggestions: <https://tinyurl.com/rrpr26disc>
- (2) Determine which people will participate in which groups (this might result in some groups being split, if they are too big, or merged, if they are too small). It's best if groups have 4-8 people in them. So we need enough topics to support that.
⇒ can be chosen during coffee break

Reproducible Research Discussions: chaired by Daniel Lopresti

Outline:

⇒ Make suggestions: <https://tinyurl.com/rrpr26disc>
- (2) Determine which people will participate in which groups (this might result in some groups being split, if they are too big, or merged, if they are too small). It's best if groups have 4-8 people in them. So we need enough topics to support that.
⇒ can be chosen during coffee break
- (3) Time for discussion, with one person in each group designated as the "scribe" to write notes, and to report back at the end. This person will also have their name appear in the final report on the website, so it's a nice job for a student or a junior researcher.

Thanks you!

Have a nice RRPR workshop !
